

ABSTRACT OF THE DISCLOSURE

Artists make use of a vanishing point on a horizon line to determine the correct slant of all lines of any subject, like the side of a building, that converge toward a vanishing point. The Right Perspective Drawing Tool has a swivel base attached that allows the user to draw straight lines that radiate off a single pivot point, the vanishing point, quickly and accurately. What is new in the art to which this invention pertains is that the user can pull out any length of tape that is needed on The Right Perspective Drawing Tool, use it like a ruler for drawing a straight line, and then let it pivot off its base to reposition the ruler for the next line.
